

## **Technical Consultant / Developer**

We are seeking a skilled and experienced NetSuite Technical Consultant. Your role will be to work directly with the company's customers to understand their business requirements and design and build solutions for these using NetSuite's SuiteCloud development platform and other integrating technologies including

### **Responsibilities**

- Design, development and support of NetSuite ERP customised applications
- Work with consultants and customers on solution gaps and suggest, design and build solutions
- Create and maintain accurate project and time tracking records
- Creation of technical documentation - specification and end user administrator guides

As part of this role you will be mentored by developers / consultants and complete self driven training / certification to upskill up on relevant NetSuite features.

### **The Candidate**

Our ideal candidate possesses a combination of strong development background, skills, good customer-facing skills, a solid understanding of business systems and existing NetSuite experience. Strong project management skills are also required as you will plan, schedule and manage your own workload with the company's customers.

### **Essential Requirements**

- Bachelor's degree in Computer Science, Engineering or Mathematics or significant hands on experience
- Knowledge of transactional business processing, including accounting principles, e.g. via an ERP
- Excellent analytical and problemsolving skills
- Experience in requirements gathering, specification, development planning & management.
- Excellent written and verbal communication skills
- An aptitude and desire for learning new technologies
- Significant software development experience
- Deep understanding and 2+ yrs solid experience of JavaScript, especially server-side but also client-side
- Previous experience of of HTML and CSS experience.

### **Desired**

- Experience with development in an ERP/CRM environment preferably on a cloud-based platform
- Understanding of design patterns
- Experience in database and UI design
- Skilled in integration approaches and strategies, with XML, web services and JSON experience
- A self-starter with solid real-world experience in application development

You will be required to evidence these requirements during the application process.

There will be a requirement to travel nationally and possibly internationally but the majority of work will be performed remotely from your home office.
