**ELECTRIC BIKES:
A BUYER'S GUIDE**

FIND YOUR ELECTRIC SMILE

At Raleigh we have a phrase that's called the Electric smile; it's the expression of happiness on just about everyone's face the first time they ride an E-bike. It sums up what E-bikes are all about – being fun, safe and easy to use.

Think about all of the best bits of cycling; independence, convenience, healthy exercise, being good for the environment, and most of all fun! Forget about the bad bits; the hills and the hard work, an E-bike overcomes these issues and makes riding a pleasure.

Raleigh has been pioneering the development of E-Bikes from their first introduction. We have huge experience of the various systems on the market. Combine that with over a century's knowledge in designing bikes for the UK, and we believe we have the best ever electric bike offering around.

Our bikes are a considered range developed with the UK environment in mind and integrating seamlessly into our standard Raleigh bike ranges - because we know you'll be using them for the same things. So whether you're looking to get about town with in style on a Spirit Electric, or take a short cut along a bridle path on the Strada Trail Sport Electric, we have the bike for you.

As part of the Accell group, we have access to the expertise of Europe's largest E-bike manufacturer and are able to partner with our sister companies in the research and development of new technologies resulting in exciting new bikes such as the Array.

You also have the added assurance that Raleigh will support you after you've made your purchase. We have trained our dealer network in all the systems we use so that you can get you back on the road in the blink of an eye. We're so confident in the quality of our products that we also offer a lifetime warranty on our frames.

Discover your electric smile today – visit your local electric bike dealer for a test-ride.

WHY AN E-BIKE?

Cycling isn't always easy. By its very nature the bicycle can be a worrying prospect to most ordinary people; it requires fitness, commitment and motivation. Let's face it, 99% of us are not competitive athletes looking to score a record time or suffer a mountainous climb, we're just looking to enjoy a bicycle ride or get from A to B without a fuss.

What if you could jump on a bicycle after a long time 'out of the saddle' and ride like every path or trail was a down-hill? What if we could take away that fear of failure? That's precisely what the modern E-bike can do. We can guarantee the first time you try one of our E-bikes will be a revelation.

What it is:

An E-bike or Pedelec is an electrically assisted bicycle; you pedal and the motor adds power - it's that simple.

What it's not:

A motorbike! It won't go flying off at uncontrollable speeds, it won't guzzle fuel like there's no tomorrow and it certainly won't require you to pay any extra tax, license fees or insurance.

Who is it for?

Every single person who buys an E-bike has a completely different and personal reason for doing so. When someone decides to get fit, leave the car at home or take up cycling as a hobby it's a very particular change in mind set. What a Raleigh E-bike does is open up that choice to virtually everyone. Cycling is now easy, fun & attractive to the 95% who shudder at the thought of struggling into a headwind or keeling over at the top of a hill on their first ride out.

Explore

E-Bikes take you further. For the regular cyclist going the 'alternative route' is always a risk, for the E-biker it's a temptation that's hard to ignore!

Relax

Don't fancy breaking a sweat? You don't have too. Struggling to keep up with traffic or setting off from the lights? Forget all of that, how does 15.5mph sound? Raleigh Electric bikes are life changing.

Just ask one of our countless customers if they could go back to riding a regular bike; they'll be smiling as they zip off over the horizon.

Frequently Asked Questions:

- **Do I have to pedal?** Our bikes are pedal-assist, meaning that power is added as the pedals are turned. A sensor picks up how much pressure you are putting in and distributes power accordingly. So you won't be getting numb hands from holding a throttle open, or struggling to temper your speed in tricky manoeuvres; our bikes deliver a natural riding feel and much greater hill climbing ability.
- **What happens when I stop pedalling?** E-bikes are still normal bicycles, so when you stop pedalling the power assist stops, and you'll freewheel like a conventional bike. Much safer than a throttle controlled bike!
- **Can I go faster than the 15mph legal limit?** The legal limit is the point at which the power stops assisting you, so basically, yes! You can go as fast as you can pedal the bike just will not provide any further assistance beyond 15mph.
- **Do I need a licence?** No. All of our e-bikes are classed as standard bicycles so no licence/insurance/MOT requirements whatsoever!
- **How long does it take to re-charge the battery?** This will vary depending on the battery type and size, but average charge times are in the region of 4 hours.
- **Do I have to run the battery flat before I can recharge it again?** No. All our e-bikes use lithium battery technology, which means that you can 'top up' your battery at any point.
- **Can I use the bike in the rain?** Yes! Our E-bikes are designed to be used in all weathers.
- **Can I jet-wash my bike?** No. You should never jet-wash any bike as it forces water into the bearings causing premature wear on the mechanical parts.
- **Can I carry load and tow a trailer?** Yes. Some of our bikes already come equipped with panniers for load carrying and most trailer systems work well with them.

E-Bikes inspire and drive mobility and are one of the most agile, comfortable and simply clever means of transportation of our time. Cutting edge components and the high degree of design flexibility offered by Bosch E-bike Systems form the foundation for our Motus and Captus models.

The powerful Bosch Drive Unit transforms any pedelec into a clever everyday companion. Wherever you're heading, an Active Line equipped Raleigh will get you there fast, calm and collected.

The Active Line motor gives just the right level of support with every push of the pedals whether that is for relaxed everyday use or more power for those times when you really need a boost. Its optimized 3-sensor concept performs 1000 highly precise measurements per second, affording optimum power tuning and a unique riding sensation. The Active Line Power Packs ensure the most powerful performance, thanks to their high energy density and long life.

The Intuvia on-board computer serves as the command centre allowing you to switch between four different riding modes; Eco, Tour, Sport & Turbo, as well as displaying information like speed, battery level, distance travelled and approximate range available.

The handy 'walk' button delivers a 'walking speed' power output from the motor for those occasions where you need to push your bicycle up some steps or a short slope. An optimal balance of powered assistance is ensured by three sensors that monitor pedalling power, cadence and speed at a rate of 1000 measurements per second.

Precise motor control and rapid processing of sensor information ensures very low levels of noise and vibration. Reliable, stable chain run prevents chain derailments, and reduces wear. The Bosch system is even clever enough to recognise your gear shifts, and in a split second, reduce power preventing damage to the chain and sprockets.

Bosch is the market leader in E-bike drive system technology – a brand trusted globally for its engineering quality.

Shimano are the world's leading supplier of bicycle components; there are more bikes fitted with Shimano controls than any other brand. Shimano have taken their knowledge of cycling, gained from years of experience, and applied it to produce one of the most innovative E-bike systems available.

The key to the Shimano STEPS system is the integration of the gears, motor and controller to produce a quiet, powerful and efficient riding experience.

For our Shimano STEPS equipped Raleigh E-bikes, we have combined the STEPS motor with Shimano's Alfine Di2 electronic hub gear, allowing you to change the gear using buttons rather than levers for a fast, smooth and precise shift that doesn't require readjustment.

This system also gives you the choice to set the bike to automatic shift. Based on bicycle speed and how fast you're pedalling the Shimano STEPS system will automatically tell the Di2 hub what gear to shift into. So while you pedal, the drive unit brainstorms and, if necessary, temporarily reduces chain tension so the hub can change to the right gear.

In plain English, this means a smoother riding experience because you won't have to worry about whether or not you're in the right gear. You'll realise right away how great automatic shifting is if you're not a regular rider or if you need to come to an abrupt halt. The Shimano STEPS system will automatically shift down to a lower gear as you stop at traffic lights for example, then give you that extra surge when the lights go green for an easy start.

The motor and control system is the heart of any E-bike, and with Shimano's intuitive, quiet and lightweight STEPS system, you'll push boundaries and feel energised while doing it.

Raleigh has worked with Accell Netherlands, Europe's largest manufacturer of E-bikes, to develop the E-motion front motor system for the Array models.

This is the best riding front motor system we have ever experienced at this price point. The custom software provides an even delivery of power meaning that the bike pulls away smoothly and without the jerky surge of rival systems.

With 5 power levels plus the boost function on a twist grip you can manage the assistance that the motor gives you to maximise the range of the battery or make the ride as easy as you want it to be. The 300wh battery gives a range of up to 108km on the lowest setting or 22km on high.

This makes it ideally suited to quick commutes and trips around town or rides with the family. The D-light motor is so small and quiet you'll hardly notice it's there until you realise how far you've gone with so little effort.

TranzX

Based in Taiwan, TranzX are at the forefront of development, creating smart solutions for E-bikes. Early adopters of E-bike technology, they manufacture their complete system in-house to ensure quality and consistency. Many leading E-bike manufacturers use TranzX systems as they offer reliable performance at an affordable price.

At Raleigh, we use the two newest systems from TranzX; the front wheel F15 motor and mid M16 motor models. Both systems benefit from new communications technology, which ensures that the motor maximises the battery range, and will allow your dealer to set the bike up for you via a USB link.

Handle-mounted power controls are placed close to the grips, so you can easily select from the three power levels, and use the speed button to give you an extra boost for hills or when you're late for work!

The F15 motor featured on the Raleigh Spirit and Pioneer models is a powerful, geared front wheel motor. This provides the bikes with great hill climbing assistance, and allows you to quickly pull away at junctions or traffic lights. Adopting the latest gear design allows the motor to be kept relatively small and quiet compared to other front wheel motor systems. The simple LED display indicates the level of power you are using and the remaining battery charge.

For the Raleigh Strada Trail Sport Electric, we use the TranzX M16 motor, as it is ideally suited to the type of riding this bike is designed for. In this instance the motor is directly connected to the cranks providing a smooth and exceptionally efficient transfer of power which is added to your pedal stroke. When combined with the Strada's 9 speed Shimano Deore gears, the M16 motor gives you the ability to easily climb steep hills on trails and the road, as well as speeding along on the flat. The M16 system features an LCD display that shows your speed, range and the power level you are using.

TranzX inspires the modern E-bike experience with intelligent solutions felt in every push of the pedal.

CHOOSING THE RIGHT BIKE

Raleigh have a wide range of E-bikes suitable for all sorts of journeys and riding conditions. Use the table below to identify the characteristics of your riding and which bikes are suitable for you.

[illegible][illegible]

LEISURE E-BIKES

Where form meets function.

The Raleigh leisure range is designed to be ridden in nonbike- specific attire, complete with practical touches such as a chainguard, full-length mudguards and a rear rack for luggage. The Leisure range is the go to range for the style-conscious urban rider.

Form meets function in perfect harmony; newly developed alloy frames make the bikes lightweight and agile whilst remaining assured along tow paths and gravel roads. These bikes really are comfortable enough to ride all day.

We have paid extra attention to the finer details of the leisure range with features like the map of Nottingham, our city of origin, cleverly laid into the mudguards and frame decal of the Centros and the elegant pin stripe which runs down the centre of the mudguards on the Pioneer. These details will have people admiring your bike up close.

Every aspect of the leisure range has been carefully thought out to ensure that function is not outweighed by style, everything has a purpose. All of this has been combined to guarantee that our leisure bicycles offer the ride and performance you have come to expect from any Raleigh bicycle.

This range pulls from over 125 years' experience of making high quality bicycle that last a lifetime and that you can be proud to ride around town.

Array

ARRAY

The Raleigh Array takes a beautifully styled alloy frame and combines it with the excellent E-Motion system that will assist you with inclines providing a smooth and controlled push. There are five different modes that are easily selected with a push of a button on the handlebar to offer you various levels of assistance, this also includes a 'walk mode' that gives slight assistance when you are walking alongside the bike.

The front wheel motor is coupled with either a 7 speed Shimano derailleur, giving a wide range of gears, or very low maintenance nexus 7 speed hub gear. The 300wh battery will take you up to 108km* on a single charge and can be removed so you can take it into the house to charge it for your next ride.

This bike comes equipped with full length mudguards, front and rear lights and an alloy rear carrier so you can ride all year round, day or night with your fully loaded pannier bags if you wish.

So who is the Array for? Well the answer is, everybody. The Array comes in two low step colour options and a cross bar version and is one of the most inclusive bikes on the market. It can be used to commute to work, getting out and about on the weekend with family or just for leisurely rides around town. All of this with an extra bit of assistance along the way.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

Also available in Navy

- 22 to 108km range • Smooth riding E-Motion system
- Low step easy to mount frame • Shimano 7 speed gears

DERAILLEUR £1100 / €1300
HUB £1250 / €1500

- Comfortable riding position • Shimano 7 speed gears

£1000 / €1200

PIONEER

PIONEER

The Pioneer has been a staple in the Raleigh range for many years and continues to be a favourite. So we have taken the same great foundation and integrated it with a TranzX electric motor system to make the Pioneer range more accessible to anyone looking to take to a bike.

With a slightly more advanced motor system than the Array, the efficient TranzX motor system will give the same great assistance as the E-motion system but with greater assistance on more undulating terrain. The 400wh battery will take you up to 75km* on a single charge, and is easily removed to charge when needed. The TranzX system has 4 different levels of assistance that can be changed whilst riding with a simple push of a button, these modes range from an eco mode that will give you a small push right up to level 4 that is ideal for riding up steeper inclines with ease.

If you are looking for a bit more assistance then relax and shift your way through the smooth Shimano 8 speed gear system that can be changed with a twist of the wrist. The bike rides on strong double wall rims that are shod with puncture resistant CST tyres which help to prevent punctures, while the alloy frame keeps the ride light and smooth.

Available in both gents and ladies options the Pioneer is a sophisticated traveller with the attention to detail of a fine sports car.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

Low step version also available

- 50 to 75km range • Powerful TranzX F16 motor
- Colour matched accessories • Shimano 8 speed gears

£1300 / €1500

CAPTUS

The new Raleigh Captus combines British design and German precision. The new frame has a lower step thru to make it even easier to get on and off and adds powerful disc brakes to give you even more control when you have to stop. With two colour options and a range of sizes there is something to suit every rider.

The Captus gets a few extra features over the Pioneer including the introduction of a front suspension fork which helps to reduce the impact of bumps in the road and makes the ride that little bit smoother. The most significant difference of the Captus is the Bosch Active Line centre mount motor system. This system encapsulates German precision and reliability and delivers them in a beautifully efficient system that will easily carry you up hills and across towns for up to 140km*.

There are two gear options available in the Captus range, we have the 9 speed Shimano derailleur version and a super clean 8 speed Nexus internal hub gear option. The Nexus system packs all the gearing into the rear hub keeping it clean from dust and dirt, reducing maintenance and helping to make the bike look even sleeker.

If you are looking for a reliable and efficient electric bike or live in a hilly area then the Captus is the perfect solution.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

Also available in Black

- 35 to 140km range • Bosch centre mount motor
- Suntour suspension forks • Easy to use Shimano 9 speed gears

DERAILLEUR £1750 / €2000
HUB £1900 / €2250

CAPTUS

The new Crossbar Captus frame complements the low step frame with a classic bicycle diamond style frame. Also benefiting from the addition of powerful Shimano disc brakes the new Captus Crossbar is now available in 2 sizes and a hub gear version.

The Captus gets a few extra features over the Pioneer including the introduction of a front suspension fork which helps to reduce the impact of bumps in the road and makes the ride that little bit smoother. The most significant difference of the Captus is the Bosch Active Line centre mount motor system. This system encapsulates German precision and reliability and delivers them in a beautifully efficient system that will easily carry you up hills and across towns for up to 140km*.

There are two gear options available in the Captus range, we have the 9 speed Shimano derailleur version and a super clean 8 speed Nexus internal hub gear option. The Nexus system packs all the gearing into the rear hub keeping it clean from dust and dirt, reducing maintenance and helping to make the bike look even sleeker.

If you are looking for a reliable and efficient electric bike or live in a hilly area then the Captus is the perfect solution.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

- 35 to 140km range • Bosch centre mount motor
- Suntour suspension forks • Easy to use Shimano 9 speed gears

DERAILLEUR £1750 / €2000
HUB £1900 / €2250

MOTUS

MOTUS

The Motus adopts the same new frame and Bosch motor system as the Captus but with an upgraded 400wh battery which will provide an extra 40km from a single charge, meaning that for some riders it could carry them to and from work for whole week before needing charging.

There are also two gear options on the Motus, with a 10 speed SRAM Via Centro derailleur system or 8 speed Nexus hub version available. The SRAM option is a great if you live in a hilly area as it offers a wider range of gears that go up in small increments, this coupled with the powerful Bosch motor will allow you to climb the most daunting hills so you can continue to enjoy the ride.

The Raleigh Motus comes fully equipped with high quality lights, full mudguards, a clever rear wheel lock and can be charged from flat in approximately 3.5 hours meaning you can be back on your bike as quickly as possible.

If you're looking for a high quality bike that has the power to let you explore even the most demanding terrain without breaking a sweat then the Motus is the bike for you.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

Also available in Bronze

- 45 to 180km range • Bosch centre mount motor
- Suntour suspension forks • SRAM Via Centro 10 speed gears

DERAILLEUR £2000 / €2350
HUB £2150 / €2550

Spirit

Spirit Electric

The Raleigh Spirit Electric is the perfect mix of style and substance. It takes the frame styling of traditional low step cycles and combines it with an elegant front wheel motor that will breeze you around town with the lightest of pedal strokes so you can just enjoy the ride.

Gearing is taken care of by the smooth Shimano Nexus 7 speed internal hub which paired with the TranzX motor, will take you up hills and around town with ease. The bike is finished off with fine details like the Raleigh heron cut into the chainwheel and a high quality light set.

The Spirit Electric is perfect if you are looking to get out and about around town and want a bike that you can carry your shopping home on easily.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

- 50 to 75km range • Powerful TranzX F16 motor
- Stylish classic frame • Easy to use Nexus 7 speed hub gears

£1400 / €1650

STRADA ELECTRIC ELITE

The new Strada E-bikes are designed to get you around the city fast and with the minimum of effort.

The new lightweight frames and 27.5" wheels ensure nimble handling to keep you moving through the traffic.

The proven Shimano STEPS e6000 centre mount provides smooth and powerful assistance and when combined with the Alivio 9 speed gears allows you to climb the steepest hills.

- Shimano Steps E6000 • Carbon blade forks with alloy steerer
- Shimano Alivio M4000 • Tubeless compatible wheels

£2250 / €2650

STRADA COMP

STRADA ELECTRIC COMP

The new Strada E-bikes are designed to get you around the city fast and with the minimum of effort.

The new lightweight frames and 27.5" wheels ensure nimble handling to keep you moving through the traffic.

The proven Shimano STEPS e6000 centre mount provides smooth and powerful assistance. The Strada Comp uses an Alfine 8 speed Di2 hub which have an automatic shifting mode to ensure your always in the right gear

- Shimano Steps E6000 • Carbon blade forks with alloy steerer
- Shimano Alfine Di2 Hub gear • Clement Strada tyres

£2500 / €2950

STRADA TRAIL SPORT ELECTRIC

And now for something completely different! The Strada Trail Sport Electric is unlike any other E-bike on the market. It is sleek yet robust enough to be ridden down even the bumpiest canal path or gravel road thanks to its strong Suntour fork and lightweight alloy frame.

The Strada TS Electric is fitted with a brand new TranzX M16 centre mount motor, which offers excellent climbing power coupled with a smooth and progressive assistance to give you a helping hand along the road or towpaths and will carry you up to 75km* on a single charge.

The motor is matched with a high quality Shimano Deore 9 speed gear set and hydraulic disc brakes that have harnessed their craft on the rough mountain bike circuit, so you can be confident they can take a bit of punishment.

The Strada Trail Sport Electric is ideal for anyone that is looking to travel across different terrains on their commute to work or weekend ride.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

- 50 to 75km range • Powefrul TranzX centre mount motor
- Suntour Suspension forks • Shimano hydraulic disc brakes

£1700 / €1975

STRADN

ELECTRIC

STRADA ELECTRIC

Stylish, sleek and built for the city; these are a few of the demands that were put to our product designers when they started designing the Strada Electric and that is exactly what they have delivered.

The Strada Electric is a new take on electric bikes in the UK market, it takes urban commuter bike credentials and opens them up to anyone looking to get on a bike. The Strada is equipped with the fantastic Shimano Steps motor system, this system is quicker off the mark than some of the other systems in our range which is great for getting away from the lights or conquering hills quickly.

The system also features automatic shifting that changes gear for you as you ride, to make sure you are always in the right gear. Don't worry, you can also change gear manually using the buttons on the handlebars.

The stylish alloy frame, fork and centre mount motor make the bike agile and balance so you can ride confidently through traffic. Like all our E-bikes the Strada is not just an bike, it is also a real option as sustainable method transport that anyone can use.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

- 40 to 125km range • Shimano STEPS system
- Carbon Fork • Electronic Di 2 Alfine gears with auto mode

£2500 / €2950

MUSTANGCOMP

MUSTANG COMP ELECTRIC

We use our Adventure bikes nearly everyday, they are easily the most numerous to be found in the bike sheds at Raleigh.

The next logical step was to add the benefits of an ebike to this range making the Mustang Electric the most versatile commuting bikes we offer.

Powered by Shimano's E6000 STEPS system and using SRAM's proven Apex 1 gearing this dropbar ebike is at home on the road and the trails.

- Shimano Steps E6000 • SRAM Apex 1 hydraulic disc brakes
- SRAM Apex 1 rear derailleur • XLC for STEPS crankset

£2800 / €3300

MUSTANG_{PRO}

MUSTANG PRO ELECTRIC

We use our Adventure bikes nearly everyday, they are easily the most numerous to be found in the bike sheds at Raleigh.

The next logical step was to add the benefits of an ebike to this range making the Mustang Electric the most versatile commuting bikes we offer.

Even more capable off road than the Mustang Elite, the Mustang Pro uses Shimano's top range E8000 motor.

With 70NM of controlled power available this bike can go almost anywhere; don't leave it to the mountain bikers to have all the fun.

- Shimano Steps E8000 • Carbon blade forks with alloy steerer
- SRAM Force 1 rear derailleur • American Classic Terrain wheels

£3950 / €4650

STOW-E-WAY

STOW-E-WAY

Sometimes a full sized bike just takes up too much space. If you live in a flat, commute by train or take a bike with you on your caravanning holiday then a folding bike is ideal. The Raleigh Stow-e-way is both a proper folding bike and a proper e-bike!

The folding frame, handlebar and pedals mean the bike can be folded to a convenient 880mm x 440mm so you can secure it in the luggage compartment on a train or the boot of your car. It will easily fit under the stairs or in the corner of the room so it's always available when you need it.

The powerful 45NM rear wheel motor will quickly get you up to speed and provide the assistance to get you around town efficiently. With wide range, smooth shifting Shimano 8 speed gears you have both the ability to get up steep hills and zip along on the flat.

The TranzX system has 4 support levels so you can decide how hard you want to work and the motor will assist you up to speedy 15mph. The 250wh battery will give you a range of up to 50km* and its small size means it can be easily removed and charged away from the bike. With a Raleigh Stow-e-way you don't have to compromise on the e-bike performance just because you don't have enough space.

*Range figure is an average and is dependent on terrain, weather conditions and level of assistance selected.

- 50km range • Powerful 45NM TranzX drive system
- 8 speed gears • Folds to 880mm x 440mm for easy storage

£1100 / €1300

BIKE

WD-40 BIKE is a range of care products specially designed to help you look after your bike all year round, whether your bike is a road bike, a BMX, an all-out Downhill racing machine, a high end cyclo cross bike or one of the new breed of intelligent ebikes that are available. The WD-40 BIKE range is a carefully formulated range of products designed to help minimise unnecessary wear and tear by effectively cleaning, lubing and protecting your bike.

The WD-40 BIKE range is the result of extensive research and development undertaken by working closely with cycling professionals and expert mechanics to produce a product range that delivers best in class performance for your bike. The additional inclusion of the famous blue and yellow can as part of the maintenance regime is how this range of care products sets itself apart from competitors.

Petluzzo[®]

100% MADE IN ITALY

The Pure Instinct 2 & 3 bike tow ball racks both feature an up-rated maximum load limit of 30kg per bike. This high maximum load makes the racks perfect for carrying the extra weight of E-bikes without a worry.

Fitting the rack to your vehicle is as simple as possible; the rack can be wheeled toward you tow bar using the built in roller wheels, then the auto adjust locking clamp easily clamps to your towball with no adjustments needed. Just fold out the tyre channels and you're ready to go.

Easily load the bikes by lifting them and placing the tyres in the racks tyre channels, then simply close the quick release ratchet straps over the wheels and clamp the crossbar or downtube of the cycle frame with the supporting arm. If you then realize you need access to your boot, no problem, the rack easily folds forwards to allow access.

Security and safety are taken care of by the built in key operated tow ball lock which locks the rack to your car, the rack also features a built in bike cable lock so you can leave the bikes on the rack with peace of mind. The homologated rear light bar and 13 pin plug offer complete road safety with fully function driving lights and number plate board.

When you're finished with the rack and need to put it away for another day, it folds down into an incredibly small package for easy storage.

- Available in 2 & 3 bike versions
- Quick and easy lockable fitting system
- Tipping features allows for access to the boot whilst fully loaded
- Supports Fat Bike and 29" size wheels and tyres
- Supplied with grab arms
- Scratch resistant powder coating
- 13 pin plug and rear light board
- Folds down for easy storage whilst not in use
- 30kg maximum weight per bike

DURANO E

ENERGIZER PLUS

ENERGIZER PLUS TOUR

SMART SAM PLUS

Need a special tyre for an E-bike?

In standard pedelecs that have motor assist up to 25km/h, there is no legal requirement for a special tyre. But even with these bikes, loads and average speeds are higher than in regular bikes, therefore we recommend only certain tyres as “E-bike Ready”.

The following Schwalbe models are all e-bike ready:

All Marathons, All Energizer, Big Apple, Big Ben and Smart Sam Plus

The Energizer Range

The Energizer range has been developed specifically for fast e-bikes. All tyres in the Energizer range have the European ECE-R75 approval and are valid on vehicles up to 50km/h. The high quality compound has a low rolling friction and above all very good grip. That means security – even in fast cornering. Some Marathon tyres also bear the ECE-R75 approval. The difference is in the compound. A Marathon is renowned for its extremely high mileage. The service life of the Energizer is not bad, but the main focus is on grip and thus safety in high speed cornering.

SELLE ROYAL

Scientia – Custom Fit Saddles

The Scientia range is comprised of 9 saddles scientifically designed to suit each individual according to his or her body and type of use. The key to selecting the correct model lies in the combination of ischial variation and riding position. Visit your local bike shop to be measured up for a Scientia saddle.

	HERTZ	<p>Hertz is an exclusive saddle whose structural elements have been developed specifically for eBike use by including a handle placed behind the saddle rear to aid in the movement of E-bikes. The saddle is padded with 3D Skin Gel, an advanced and flexible system where Royalgel™ is placed strategically according to the anatomical needs of the rider with a lighter final weight, guaranteeing the same pressure reduction on the perineal and ischial areas up to 40%.</p>
E-BIKE SPECIFIC USE
